1. Plan Overview and Pricing

CloudKart offers four subscription tiers designed to scale from individual hobby use to enterprise-grade deployments. This document describes what each plan includes, how billing cycles work, and how customers can change plans. It is the canonical source for any question involving plan names, pricing structure, or what a given tier includes.

Plan	Monthly Price	Annual Price	Best For
Starter	\$0	\$0	Individuals evaluating CloudKart
Plus	\$12 / month	\$120 / year	Freelancers and small projects
Pro	\$39 / month	\$390 / year	Growing teams with API needs
Enterprise	Custom	Custom	Organizations needing SSO, SLAs, dedicated support

Pricing shown is in USD. Customers billed in other currencies see a converted amount at the exchange rate applied at each renewal. The plan tiers themselves are global and do not differ by region — only the billed currency and applicable tax may vary.

Worked Examples

Scenario: Customer asks which plan lets them add 10 team members.

Resolution: Pro allows up to 20 team members; recommend Pro. Enterprise is needed above 20.

Scenario: Customer asks if there is a free plan.

Resolution: Yes — Starter is permanently free with 1 project and 1,000 API requests/month.

2. Feature and Usage Limits by Plan

Each plan unlocks a different set of features and usage limits. Limits reset at the start of each billing cycle, not on the calendar month, except where noted.

Feature	Starter	Plus	Pro	Enterprise
Projects	1	5	Unlimited	Unlimited
API requests/month	1,000	25,000	250,000	Custom
Team members	1	3	20	Unlimited
Priority support	No	No	Yes	Yes + SLA
SSO	No	No	No	Yes
Data export	CSV only	CSV, JSON	CSV, JSON, API	All + bulk export

API request limits count all requests made by any key associated with the account, including background integrations and webhook test calls. Customers building integrations should account for this when estimating whether their plan's limit is sufficient, and should consider moving keys between test and production environments to isolate consumption accurately.

Worked Examples

Scenario: Customer on Plus asks why their API calls are failing with 'quota exceeded'.

Resolution: Plus is limited to 25,000 requests/month; check if the month's limit has been hit and advise upgrading to Pro for 250,000 requests.

Scenario: Customer asks what data export formats Pro supports.

Resolution: Pro supports CSV, JSON, and API-based export; Enterprise adds bulk export.

3. Billing Cycles

Subscriptions bill automatically at the start of each cycle using the default payment method on file. Monthly plans bill every 30 days from the original signup date; annual plans bill once per year on the signup anniversary.

Customers can switch between monthly and annual billing at any time from Account Settings > Billing > Billing Cycle. Switching from monthly to annual takes effect immediately and is pro-rated against the remaining days in the current monthly cycle. Switching from annual to monthly takes effect at the end of the current annual term to avoid a partial-year refund calculation.

Tip

Annual plans save approximately 17% compared to paying monthly for 12 months. This is a good upsell point for customers asking about cost, but agents should never pressure a customer who has explicitly chosen monthly billing.

Billing date anchoring to the original signup date (rather than the first of the month) is intentional and cannot be changed. Customers occasionally ask to align their billing to a calendar date for accounting purposes; agents should explain that this is not supported, but that annual billing effectively gives them 12-month predictability from their anniversary date instead.

Worked Examples

Scenario: Customer on monthly Pro wants to switch to annual to save money.

Resolution: Confirm the switch from Account Settings; a pro-rated charge covers the rest of the current monthly cycle, then annual billing starts.

Scenario: Customer asks if they'll be billed on the 1st of the month.

Resolution: Billing is anchored to the original signup date, not the calendar month; inform them of their next billing date visible in Account Settings > Billing.

4. Upgrading and Downgrading

Customers can upgrade or downgrade plans at any time from Account Settings > Billing > Change Plan. The effect on billing depends on the direction of the change.

- 1 **Upgrading** (e.g., Plus to Pro): Takes effect immediately. A pro-rated charge covers the remainder of the current billing cycle at the new plan's rate, and new feature limits apply right away.
- 2 **Downgrading** (e.g., Pro to Plus): Takes effect at the end of the current billing cycle. The customer keeps current features until the cycle ends; no partial refund is issued.
- 3 **Switching to Enterprise:** Requires the Sales team to finalize a custom contract; this cannot be self-served from the billing portal.

If a downgrade would put a customer's current usage over the new plan's limits (e.g., 8 team members on a plan that allows 3), the downgrade is still permitted, but the account is placed in a grace period during which no new team members or projects can be added until usage is brought back under the limit.

Worked Examples

Scenario: Pro customer wants to downgrade to Plus immediately.

Resolution: Downgrade takes effect at end of current cycle; features remain Pro until then. No pro-rated refund for the remaining days.

Scenario: Customer wants to move from Pro to Enterprise.

Resolution: Route to the Sales team; Enterprise cannot be self-served from the billing portal.

5. Free Trials

All paid plans include a 14-day free trial for first-time subscribers. No payment method is required to begin Starter, Plus, or Pro trials; a payment method is required before the trial ends to avoid automatic downgrade to Starter.

- Trial reminders are sent automatically 3 days and 1 day before the trial ends.
- If a payment method is added during the trial, billing begins only after the trial period completes, not immediately upon adding the card.
- Customers may only use one free trial per plan tier per account; creating a new account to claim a second trial violates the Terms of Service.
- Enterprise plans do not use the standard trial system; trial-equivalent pilots are arranged directly with the Sales team.

Worked Examples

Scenario: Customer forgot to add a payment method and trial expired, downgrading to Starter.

Resolution: Trial already ended — no grace extension is available. Customer must subscribe normally; if they had active Pro data, it is preserved for 90 days.

Scenario: Customer claims they never used their trial and wants another one.

Resolution: One trial per plan tier per account; cannot grant a second trial — explain and offer the 14-day refund window as an alternative if they subscribe now.

6. Cancelling a Subscription

Cancelling a subscription stops future billing but does not always remove access immediately. Understanding the distinction is important when customers ask 'will I lose my data right away?'

Action	What Happens to Access	What Happens to Data
Cancel monthly plan	Continues until end of current cycle	Retained for 90 days after access ends
Cancel annual plan	Continues until end of annual term	Retained for 90 days after access ends
Immediate account deletion (separate request)	Ends immediately	Permanently deleted after 30-day recovery window
Payment failure, unresolved	Downgraded to Starter after grace period	Data over Starter limits archived, not deleted

Important

Cancelling a subscription is reversible at any time before the cycle ends by simply resubscribing. Account deletion is a separate, more permanent action and should never be conflated with subscription cancellation when assisting a customer.

Worked Examples

Scenario: Customer cancelled Pro but is panicking that their data was deleted.

Resolution: Reassure them — access continues until the cycle ends and data is retained for 90 days after that. Point them to Account Settings to resubscribe if needed.

Scenario: Customer accidentally clicked 'Delete Account' instead of 'Cancel Subscription'.

Resolution: Account deletion has a 30-day recovery window; escalate to Billing Team Lead immediately to initiate recovery before data is permanently removed.

7. Pausing a Subscription

Pausing a subscription is available on Plus and Pro plans for customers who need a temporary break without losing their configuration, projects, or team setup. This differs from cancellation in that billing stops but the account is not downgraded.

- 1 Customer selects **Pause Subscription** from Account Settings > Billing.
- 2 Customer chooses a pause duration of 1, 2, or 3 months.
- 3 Billing stops immediately; the account becomes read-only for the pause duration.
- 4 Billing and full access resume automatically at the end of the chosen pause period unless the customer cancels before then.

A subscription can be paused at most twice per 12-month period. Starter and Enterprise plans are not eligible for pausing. Customers who try to pause a Starter plan should be informed that Starter is already free, so pausing is not applicable.

Worked Examples

Scenario: Customer going on parental leave for 2 months wants to pause their Pro plan.

Resolution: Eligible — Pro supports up to 3-month pauses. Guide them to Account Settings > Billing > Pause Subscription and confirm the resume date.

Scenario: Customer wants to pause their Enterprise plan.

Resolution: Enterprise plans are not eligible for self-service pausing; direct them to their account manager or the Sales team to discuss temporary contract modifications.

8. Discounts and Promotional Pricing

Discounts and promotional pricing are applied through coupon codes, referral credits, or negotiated enterprise terms. This section explains how each works so agents can correctly explain billing discrepancies.

- **Coupon codes:** Applied at checkout or from Account Settings > Billing > Apply Coupon. Most codes apply a percentage or fixed discount to the first billing cycle only, unless explicitly marked as a recurring discount.
- **Referral credits:** Earned when a referred friend completes their first paid billing cycle. Credits are applied automatically as account credit, not as a direct discount on the next invoice line.
- **Non-profit and education pricing:** Requires manual verification through a separate application form and is applied manually by the Billing team, not self-service.

When a customer reports that a discount they expected is missing from their invoice, agents should first check whether the coupon had a single-cycle restriction, whether the referral cycle has completed, or whether their non-profit/education application was actually approved. Each of these has a different resolution path.

Worked Examples

Scenario: Customer applied a 20%-off coupon but their invoice shows full price.

Resolution: Check the coupon's terms in the Billing Console; if it was single-cycle, explain it was applied to the first invoice only.

Scenario: Customer referred a friend but hasn't received their referral credit.

Resolution: Referral credits are issued after the referred friend's first paid cycle completes — check whether the friend has actually converted to a paid plan.

9. Quick Reference: Plan Change Outcomes

This quick reference covers the most common plan-change scenarios and the correct billing outcome for each, to allow agents to answer confidently without having to re-read the full policy during each contact.

Scenario	Billing Impact	Access Impact
Monthly → Annual mid-cycle	Pro-rated charge immediately	New limits active immediately
Annual → Monthly	No charge; takes effect at cycle end	Current limits until term end
Upgrade (e.g., Plus → Pro)	Pro-rated charge immediately	New limits active immediately
Downgrade (e.g., Pro → Plus)	No refund; takes effect next cycle	Current limits until cycle end
Cancel subscription	No further charge	Access until cycle end; data 90 days
Pause subscription (Plus/Pro only)	Billing paused immediately	Read-only for pause duration

Worked Examples

Scenario: Customer asks: 'If I upgrade now, when do I get the new features?'

Resolution: Immediately — upgrades take effect right away with a pro-rated charge for the remainder of the current billing cycle.

Scenario: Customer asks: 'If I downgrade, will I get a refund for this month?'

Resolution: No — downgrades take effect at the next cycle with no pro-rated refund for the current cycle, but the customer keeps the higher plan's features until then.

Appendix A: Subscription Terminology

Common subscription-related terminology.

Term	Definition
Billing cycle	Recurring period (monthly or annual) between charges
Pro-ration	Partial charge or credit for a mid-cycle plan change
Grace period	Window after a downgrade or failed payment before access is restricted
Seat	A team member slot counted against the plan's team member limit
Account credit	Non-cash balance applied automatically to future invoices
