1. About This Document

This document answers general questions about CloudKart as a company: who we are, how to reach support, our policies on accounts and acceptable use, and how to get started. Questions that are specific to billing, technical issues, or shipping are better answered by their dedicated documents; this document is the right source when a question is broad, introductory, or about CloudKart's policies in general.

Routing Note for the Support Chatbot

Use this document for company-level questions such as support hours, contact methods, account creation, and general policy questions. Route billing, technical, and shipping questions to their respective category retrievers even if phrased generally — for example, 'how much does it cost?' is a billing/subscription question, not a general FAQ.

Worked Examples

Scenario: Chatbot receives: 'Can I talk to a real person?'

Resolution: General FAQ — Section 3 covers support channels including live chat with a human agent during business hours.

Scenario: Chatbot receives: 'What is CloudKart?'

Resolution: General FAQ — answer directly from Section 2 with a concise description.

2. About CloudKart

CloudKart is an e-commerce and software platform that helps small and mid-sized businesses manage online storefronts, inventory, and customer orders, with an additional API platform for developers building integrations on top of CloudKart data.

CloudKart was founded with the goal of making professional-grade commerce tooling accessible to businesses that don't have a dedicated engineering team, while still offering an API and developer tools for those that do. The platform handles everything from product listings and checkout to post-purchase support workflows.

Worked Examples

Scenario: Customer asks 'Is CloudKart like Shopify?'

Resolution: CloudKart is a similar category of tool — an e-commerce and order management platform — but with a stronger focus on API-first integrations for developer teams. Avoid making direct comparisons that could be seen as misleading.

Scenario: Customer asks what countries CloudKart operates in.

Resolution: CloudKart is available globally for digital products and ships physical merchandise to 60+ countries; see the Shipping Policy for the full country list.

3. Support Hours and Channels

Support is available through multiple channels depending on the customer's plan and the urgency of the issue.

Channel	Availability	Typical Response Time
Support Chatbot	24/7	Immediate for FAQ-type questions
Live Chat (human agent)	Mon–Fri 8AM–8PM EST; Sat–Sun 10AM–4PM EST	Under 5 minutes during open hours
Email Support	24/7 intake	Within 24 hours, all plans
Phone Support	Mon–Fri 9AM–6PM EST	Pro and Enterprise only
Priority Support (Enterprise)	24/7 with SLA	Per signed Enterprise SLA

Holiday hours differ from the standard schedule above; the current holiday schedule is published on the Support Hours page each year. During major holidays the chatbot remains fully operational, but live chat and phone hours are reduced or unavailable. Agents should set this expectation with customers who need human assistance outside normal hours.

Worked Examples

Scenario: Customer asks if support is available on Christmas Day.

Resolution: The chatbot is always available; live chat and phone are closed on major holidays — direct them to email support which has 24/7 intake and a 24-hour response SLA.

Scenario: Starter plan customer asks for phone support.

Resolution: Phone support is available on Pro and Enterprise plans only; offer live chat or email as alternatives available to all plans.

4. Contact Directory

The fastest way to reach a human is through Live Chat during open hours, accessible from the bottom-right corner of any CloudKart page or from the Help menu in the app.

Purpose	Contact
General support	support@cloudkart.com
Billing-specific inquiries	billing@cloudkart.com
Security reports (including vulnerabilities)	security@cloudkart.com
Press and media inquiries	press@cloudkart.com
Partnerships and integrations	partners@cloudkart.com
Phone (Pro & Enterprise only)	+1 (800) 555-0182

Security vulnerability disclosures should always be sent to security@cloudkart.com and never discussed publicly before CloudKart has had an opportunity to assess and remediate the issue. CloudKart operates a responsible disclosure programme and coordinates with researchers before any public announcement.

Worked Examples

Scenario: Customer asks for the best email for a billing dispute.

Resolution: Direct them to billing@cloudkart.com — this routes directly to the billing team rather than going through general support triage first.

Scenario: Developer thinks they found a security bug in the API.

Resolution: Direct them to security@cloudkart.com immediately; emphasise not to post details publicly until the team has reviewed and responded.

5. Creating an Account

Anyone can create a free CloudKart account; no payment method is required for the Starter plan.

- 1 Go to cloudkart.com/signup and enter an email address and password, or choose 'Continue with Google' or 'Continue with Microsoft' for social signup.
- 2 Verify the email address using the confirmation link sent to the inbox; verification is required before placing orders or accessing billing features.
- 3 Complete the brief onboarding questionnaire, which helps tailor default settings but can be skipped.
- 4 The account is immediately active on the Starter plan; upgrading can be done at any time from Account Settings > Billing.

Team accounts — where multiple people share an account — are managed differently from individual signups. A team admin creates the main account, then invites team members from Account Settings > Team. Each team member signs in with their own individual credentials rather than sharing a single login, which is required for audit logging and per-seat billing to work correctly.

Worked Examples

Scenario: Customer hasn't received their email verification link.

Resolution: Check spam/junk first; if not there after 5 minutes, they can request a resend from the login screen by clicking 'Resend verification email'.

Scenario: Small business owner wants to add two employees to their account.

Resolution: Direct them to Account Settings > Team after upgrading to Plus (supports up to 3 members) or Pro (supports up to 20 members).

6. Acceptable Use

CloudKart accounts are intended for legitimate business and personal commerce use. The following are not permitted and may result in account suspension or termination.

- Creating multiple accounts to repeatedly claim free trials or promotional offers intended for first-time customers only.
- Using the platform to sell counterfeit goods, stolen goods, or items prohibited by CloudKart's Prohibited Items list.
- Attempting to circumvent rate limits, security controls, or usage limits through automated means not sanctioned by the official API.
- Sharing account credentials in a way that violates the per-seat licensing terms of a paid plan.
- Using the platform to facilitate spam, phishing, or any form of consumer fraud.

Note

First-time policy violations typically result in a warning and required corrective action rather than immediate termination, except in cases of fraud or illegal activity, which result in immediate suspension pending review.

Worked Examples

Scenario: Customer's account was suspended and they don't know why.

Resolution: Check the suspension reason in the Admin Console; if it's a policy violation, explain the specific violation and the reinstatement process. Do not reinstate fraud-related suspensions without Billing Team Lead approval.

Scenario: Customer asks if they can create a second account for a new side business.

Resolution: Yes — multiple accounts for different businesses are allowed, provided each account is used legitimately; this is different from creating duplicate accounts to claim repeated trials.

7. Privacy and Data Handling

CloudKart's data handling practices are governed by the full Privacy Policy and Terms of Service published at cloudkart.com/legal. This section summarises the points most frequently asked about in support.

- Customer data is encrypted in transit and at rest, and is never sold to third parties.
- Customers can request a full export of their account data at any time from Account Settings > Privacy > Export My Data.
- Account deletion requests are processed within 30 days, during which the request can still be cancelled; data is permanently removed after this window.
- CloudKart is compliant with GDPR for EU customers and CCPA for California customers, with region-specific request forms available on the Privacy page.
- Sub-processors (third-party tools that may process customer data on CloudKart's behalf) are listed on the Sub-processors page at cloudkart.com/legal/sub-processors.

Worked Examples

Scenario: EU customer wants to exercise their GDPR right to erasure.

Resolution: Direct them to the GDPR request form at cloudkart.com/legal/gdpr-request; requests are processed within 30 days as required by regulation.

Scenario: Customer asks if CloudKart sells their data to advertisers.

Resolution: No — CloudKart does not sell customer data to any third party. Share the Privacy Policy link for full details if they want to review the specifics.

8. Other Common General Questions

This section addresses broad questions that don't fit neatly into billing, technical, or shipping categories.

Q: Is there a CloudKart mobile app?

A: Yes, available for iOS and Android. The mobile app offers most features of the web app with the exception of advanced API key management, which is web-only at this time.

Q: Can I have multiple CloudKart accounts for different businesses?

A: Yes, this is permitted and common; each account is billed and managed independently. For managing several businesses under one login, Enterprise plans offer a multi-organisation workspace feature.

Q: Where can I see the status of CloudKart's systems?

A: status.cloudkart.com shows real-time system status and historical incident reports; customers can subscribe to updates by email or SMS.

Q: Does CloudKart offer student or non-profit discounts?

A: Yes — verified students and registered non-profits receive 50% off Plus and Pro plans; see the Subscription Plans document for the application process.

Worked Examples

Scenario: Customer asks whether there's an offline version of CloudKart.

Resolution: No offline mode exists currently; the app requires an internet connection. The desktop app caches some data for viewing but not full offline editing.

Scenario: Customer asks what browser is supported.

Resolution: CloudKart supports the latest two major versions of Chrome, Firefox, Safari, and Edge. Internet Explorer is not supported.

9. Routing Reference for Ambiguous Questions

The table below helps route ambiguous, broadly-phrased questions to the correct specialised document when one exists, falling back to this General FAQ when no category clearly applies.

Question Pattern	Likely Category	Notes
'What are your support hours?'	General FAQ	Section 3
'How do I contact you?'	General FAQ	Section 4
'How do I create an account?'	General FAQ	Section 5
'What is your refund policy?'	Billing	refund_policy.pdf
'Why hasn't my order shipped?'	Shipping/Orders	shipping_policy.pdf
'How do I reset my password?'	Technical	password_reset.pdf
'What's your privacy policy?'	General FAQ	Section 7; link to full policy
'How much does it cost?'	Billing	subscription_plans.pdf

Ambiguous questions with keywords from multiple categories (e.g., 'billing problem with my order') should be resolved by asking the customer a single clarifying question — for example, 'Is this about a charge or about the status of your shipment?' — before routing to a specific retriever.

Worked Examples

Scenario: Customer asks: 'I have a problem with my account.'

Resolution: Too vague — ask whether it's related to logging in, billing, or their plan before routing to a document.

Scenario: Customer asks: 'How do I upgrade?'

Resolution: Route to subscription_plans.pdf Section 4 (Upgrading and Downgrading); this is a billing/subscription question despite sounding general.

10. Quick Reference: Full Knowledge Base Index

This quick reference consolidates the knowledge base document map and the chatbot routing guide into a single printable reference card for new support agents and for the chatbot's routing layer.

Full Document Index

Document	Code	Category	Primary Topics
refund_policy.pdf	BIL-RP-2026	Billing	Refund windows, exclusions, chargebacks, duplicate charges
subscription_plans.pdf	BIL-SP-2026	Billing	Plan tiers, pricing, upgrades, cancellation, pausing
billing_faq.pdf	BIL-FAQ-2026	Billing	Failed payments, unrecognised charges, currency, invoices
api_setup.pdf	TEC-API-2026	Technical	API keys, rate limits, error codes, webhooks, SDKs
troubleshooting.pdf	TEC-TS-2026	Technical	App crashes, slow loading, installation, sync, notifications
password_reset.pdf	TEC-PR-2026	Technical	Password reset, 2FA recovery, social login, lockouts
shipping_policy.pdf	SHP-POL-2026	Shipping	Shipping methods, order lifecycle, international, tracking
returns.pdf	SHP-RET-2026	Shipping	Return eligibility, self-service flow, exchanges, defects
delivery_issues.pdf	SHP-DEL-2026	Shipping	Delays, lost packages, customs holds, wrong items
general_faq.pdf	GEN-FAQ-2026	General FAQ	Support hours, contacts, account creation, privacy, AUP

The support chatbot should index all documents above. The routing classifier should identify the category first (Billing, Technical, Shipping, General) and then retrieve from the most relevant document within that category. Category ambiguity is resolved by the clarifying question flow described in Section 9 of this document.

Appendix A: Knowledge Base Document Map

Quick reference for which document to consult first based on broad question category, for use by support agents new to the knowledge base structure.

Category	Primary Documents
Billing	refund_policy.pdf, subscription_plans.pdf, billing_faq.pdf
Technical Support	api_setup.pdf, troubleshooting.pdf, password_reset.pdf
Shipping / Orders	shipping_policy.pdf, returns.pdf, delivery_issues.pdf
General FAQ	general_faq.pdf (this document)
